

FIRE SCIENCE
 Associate of Applied Science Degree
 Catalog 2009-2010

The Associate of Fire Science is designed to give students the essential educational and hands-on elements needed for a career in firefighting. Students will receive training in the basic concepts of firefighting and will participate in actual hands-on evolutions that will give them real experience in the firefighting career field. This program is extremely physically demanding and requires participants to successfully complete evolutions where the students operate in the most aggressive atmospheres that a human being can survive. **The Associate of Applied Science in Fire Science is intended for students who are seeking employment by local fire and rescue service organizations.** However, many of the entry-level courses do not require a fire department affiliation.
