

## SYLLABUS

COURSE#: DHYG 221

COURSE TITLE: Dental Biomaterials

# of CREDITS: 3 (2 + 3 + 0)

### CATALOG DESCRIPTION:

A study of the composition, chemical and physical properties, manipulation, and uses of dental materials. Laboratory experiences include the manipulation and application of various materials used in dentistry.

Prerequisites: completed with a "C" or better: DHYG 111, DHYG 113, DHYG 114, DHYG 115, DHYG 217 and ENGL 211 or 218.

### COURSE OBJECTIVE:

Upon completion of this course, the student should be able to identify, describe, and evaluate materials routinely used in dentistry according to physical, mechanical and biological characteristics. The student will be able to properly manipulate materials routinely used in dentistry.

### COURSE GOALS:

1. Explore the present theoretical and practical knowledge of the composition, properties, manipulative variables and uses of dental materials.
2. To familiarize the student with the current materials used in dentistry to the extent that they will understand the materials' characteristics, indications and contraindications relating to patient treatment.
3. Provide experience in the manipulation of materials through laboratory and clinical exercises, enabling the student to perform selected patient treatment procedures to clinical competency
4. Prepare the student to function as a viable member of the dental health team.

### LEARNING OUTCOMES: Upon completion of this course the student will:

1. Be able to define the science of dental materials and describe the vital role that a dental auxiliary plays in the preparation and placement of dental materials.
2. Develop an understanding of the chemistry involved in dental materials to include elements, matter, measurement, bonding, and chemical properties of dental materials.
3. Demonstrate infection control and safety practices in dealing with dental materials and proficiency in utilization and maintenance of laboratory equipment.
4. Be able to evaluate effects of specific materials on the oral environment, the effectiveness of such materials in prevention and treatment of oral disease, and the factors which influence the quality of dental materials.
5. Be able to identify and differentiate between various dental materials (in vivo, in vitro and radiographically) and their respective properties.
6. Be able to facilitate the selection, preparation, manipulation, placement, and care of the materials used in dentistry.

7. Actively and independently acquire, apply and adapt skills and knowledge to develop expertise and a broader understanding of the world as lifelong learners.
8. Think analytically and creatively to explore ideas, make connection , draw conclusion , and solve problems
9. Exchange ideas and information with clarity and originality in multiple contexts
10. Demonstrate proficiency in the use of technologies in the broadest sense related to their field of study
11. Act purposefully, reflectively, and respectfully in diverse and complex environments.

This syllabus developed by: Julius N. Manz DDS    Date: 10/26/2006

COURSE GUIDE

DHYG 221 Dental Biomaterials (2 + 3 + 0) 3 credit hours

Instructor: Dr. Julius N. Manz

Office Phone: 566-3018

E-mail: [manzj@sanjuancollege.edu](mailto:manzj@sanjuancollege.edu)

Office: 55323

Office Hours: Mon 1:00pm – 5:00pm, Tues 8:00am – 10:00am & 4:00pm – 5:00pm,  
Wed 8:00am – 11:00am or by appointment.

Required Textbooks: Materials in Dentistry: Principles and Applications (2001) 2<sup>nd</sup> Ed., Ferracane, J., Philadelphia: Lippincott, Williams & Wilkins.  
Radiographic Interpretation for the Dental Hygienist (1993) 1<sup>st</sup> Ed., Haring, J., Jansen, L., Philadelphia: Saunders

Supplementary Materials: Clinical Aspects of Dental Materials (2000) Gladwin, M., Bagby, M., Philadelphia: Lipincott Williams & Wilkins  
Dental Materials: Properties and Manipulation (2004) 8<sup>th</sup> Ed, Craig, R., Powers J., and Wataha J., St. Louis: Mosby  
Current literature  
Reference tests available in library

Grading criteria:\*

Lecture 60% of total grade

- Quizzes 30%
- Research paper 20%
- Midterm Exam 25%
- Final Comprehensive Exam 25%

Laboratory 40% of total grade

- Lab modules 50%
- Lab competencies 50%

A = 90 -100

B = 80 – 89

C = 75 – 79

D = 65 – 75 \*\*

F = Below 65% \*\*

\* *A dental hygienist must exhibit professionalism through the application of a professional code of ethics. Unprofessional conduct will be reflected in the grade and may be grounds for dismissal. Refer to the Student Handbook for further information.*

\*\**A final grade below a "C" (75%) will interrupt a student's progress, and may result in dismissal from the Dental Hygiene Program. It is the responsibility of any student having difficulty with this course to contact the professor immediately and arrange for tutoring and/or other assistance.*

## Instructor's Policies:

### Preparation:

During this course it is expected that the student prepare for class. This includes reading or viewing the information to be discussed *prior* to class. Students should be prepared to participate in active learning discussions in each class on the topic assigned for that day. If the student has adequately prepared for the class there should be little trouble passing quizzes, exams or completing course assignments.

### Attendance Policy:

Students are expected to attend all regularly scheduled classes for which they are registered. Valid reasons for missing classes do not relieve the student from making up any missed work. Students are expected to be in the classroom, laboratory or clinic and be ready to begin the session on time.

### Lab/Clinic Usage:

Students are not allowed in any lab or clinical area without direct faculty supervision. If you need to use the lab or clinic outside regularly scheduled class times you must make arrangements with your instructor or other faculty member.

### Make-Up Policy:

If a major examination is missed, it is the student's responsibility to make arrangements with the instructor and schedule a Make-Up Examination. *The Make-Up Exam will be different from the one given to the other students and may be oral, written, or a combination of both.* A student will not be allowed to make up quizzes (a zero will be given for each missed quiz).

### Assignments:

Assignments are to be handed in properly labeled at the start of class on the date designated. Assignments turned in later will receive a 10% reduction in grade.

### Professional Policy:

All students are expected to participate in an active and productive manner which enhances learning for all in the classroom and clinical settings. Students are considered mature enough to seek faculty assistance and to monitor their own progress in meeting course requirements. Professional language and demeanor are expected at all times.

### Academic Dishonesty:

Unethical and unprofessional activities will not be tolerated. Refer to the Dental Hygiene Handbook and the SJC Catalogue for more information.

### Student Grievance Procedure:

Policies regarding Student Grievance can be found on page 54-55 of the SJC Course Catalog 2003-2004. A student who is experiencing a problem with the course or the course Instructor should make every attempt to resolve the problem with the course Instructor *first*. The student should then appeal to the Program Director. If the response is not adequate to the student, the student should then appeal to the Vice President of Student Services.

### Course Outcomes Inventory:

The effectiveness of DHYG 231 is measured by several methods:

1. Completion of all course work with a satisfactory grade.
2. Course evaluations.
3. Analysis of clinical application of material presented.
4. Scores on National and Regional Boards are reviewed and evaluated.

Accommodations Statement:

Students who need accommodations (i.e. note taker, interpreter, special seating, etc.) need to provide accommodation notices to the instructor. Students can contact the Students with Disabilities on Campus (SDOC) Coordinator in the Counseling Center located in the Clocktower Building to make arrangements and provide documentation in accordance with the Americans with Disabilities Act of 1990.

## DHYG 221 Dental Materials

**Note: Clinical Competency:** Students who have demonstrated lab competency must demonstrate such skills in a clinical environment (Practicum or Clinic) to be considered *Clinically Competent*.

| Om   | Learning Activity   | Objectives   | Course Outline  | Time   |
|--|---|--|---|--------|
| 6/1<br>Tues  | Course Introduction   |  |   | 2 Hour |
|  | Materials Introduction<br>Chapter 1   | <ol style="list-style-type: none"> <li>1. Explain the overall goal of a course in dental materials and its importance in the current and future training of the oral health care provider.</li> <li>2. Describe specific conditions within the oral cavity that make it such a demanding environment for the placement and long-term performance of dental materials.</li> <li>3. List and explain the characteristics of the ideal dental material.</li> <li>4. Describe the programs that are in place in ensure that quality control is maintained during the manufacture of dental devices and that materials for intraoral use are safe and effective.</li> </ol> | <ol style="list-style-type: none"> <li>I. Goals</li> <li>II. History of Dental Materials</li> <li>III. The Oral Environment</li> <li>IV. Characteristics of the Ideal Dental Material</li> <li>V. Quality Assurance Programs</li> </ol> |        |
|  | Sutures & Dressings<br>Handout (Sutures and Dressings, Cortell, M)  | <ol style="list-style-type: none"> <li>1. Describe the various types of suture materials used in Dentistry and their indications and contraindications</li> <li>2. Describe the proper timing and procedure for removal of surgical sutures</li> </ol>   |   |        |
| Dental Dam<br>Handout (Advanced chairside functions) | <ol style="list-style-type: none"> <li>1. Explain the purpose of the dental dam and identify who places the dental dam on a patient</li> <li>2. List and explain the advantages and contraindications of the dental dam</li> <li>3. Identify the armamentarium needed for the dental dam procedure and explain the function of each</li> <li>4. Explain how to prepare the patient for the dental dam placement, explain how to determine the isolation area: and describe and demonstrate how the dental dam material is prepared</li> <li>5. List and demonstrate the steps of placing and removing the dental dam</li> </ol> |  |   |        |

|                    |   |  |  |  |
|--------------------|---|--|--|--|
| <p>6/7<br/>Mon</p> | <p>Characteristics of materials (cont)<br/>Chapter 2</p> <p><b>Quiz</b></p> | <ol style="list-style-type: none"> <li>1. Describe the four classes of materials and give dental examples of each</li> <li>2. Define thermal conductivity and the coefficient of thermal expansion and discuss their importance in dentistry, using clinical examples</li> <li>3. Explain the significance of achieving adhesion in dentistry and list physical and clinical factors that determine successful adhesion</li> <li>4. Define color in terms of hue, value, and chroma and give appropriate values for natural teeth</li> <li>5. compare tarnish and corrosion in terms of the extent and nature of the degradation they produce on metallic restorations</li> <li>6. Identify a galvanic cell and discuss its impact in terms of biocompatibility and degradation of existing restorations</li> <li>7. Define stress and strain and identify elastic modulus, ultimate strength, percent elongation, toughness, resilience, and elastic limit on a stress-strain curve: describe the clinical significance of each for a dental restorative</li> <li>8. Define hardness, fatigue, creep, and fracture toughness and explain the importance to dental materials</li> <li>9. Identify and explain the factors that contribute to secondary decay in terms of placement of a dental restoration</li> <li>10. Explain the hydrodynamic theory of pulp pain and identify possible causes for sensitivity, given a set of clinical observations</li> </ol> | <ol style="list-style-type: none"> <li>I. Classes of Materials – Examples in Dentistry       <ol style="list-style-type: none"> <li>A. Metals</li> <li>B. Ceramics</li> <li>C. Polymers</li> </ol> </li> <li>II. Structure of Material       <ol style="list-style-type: none"> <li>A. Bonding</li> <li>B. Atomic arrangements</li> </ol> </li> <li>III. Physical characteristics       <ol style="list-style-type: none"> <li>A. Thermal and electrical properties</li> <li>B. Solubility and sorption</li> <li>C. Adhesion Color and Esthetics</li> <li>D.
